

DAILY ONLINE ACTIVITIES SUMMARY

Date:	08/07/2020	Name:	Pramod R
Sem & Sec	4 th sem B section	USN:	4AL18CS059
Online Test Summary			
Subject	Design and analysis of algorithms.		
Max. Marks	30	Score	–
Certification Course Summary			
Course	What is data science		
Certificate Provider	udemy	Duration	3 weeks
Coding Challenges			
Problem statement: write a java program to find whether the given strings are anagram.			
Status: done			
Uploaded the report in Github		yes	
If yes Repository name		https://github.com/alvas-education-foundation/Pramod_R	
Uploaded the report in slack		yes	

Online Test Details: (Attach the snapshot and briefly write the report for the same)

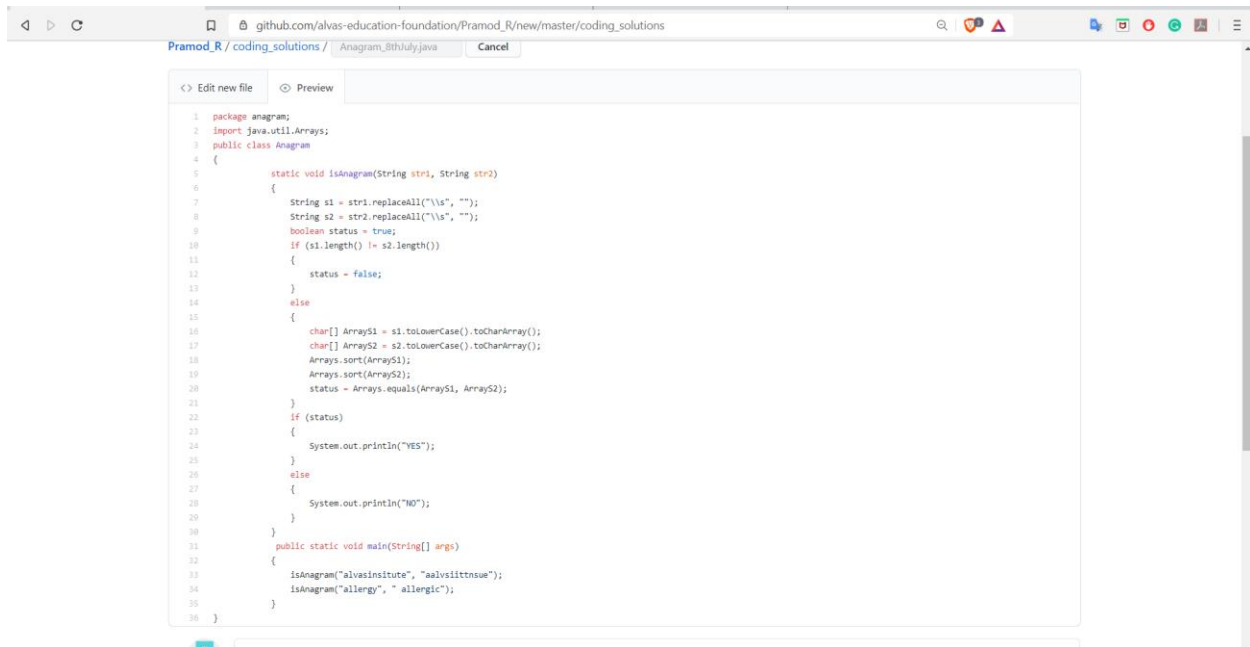

Design and analysis of algorithms written internals was conducted today. The questions was sent through google classroom . The answers were written and scanned file is uploaded in google classroom. The above was screenshot of google classroom.

Certification Course Details: (Attach the snapshot and briefly write the report for the same)

The course I have chosen during the lockdown period is what is data science . Since I had previously knew few topics about data science iam continuing this course.

Coding Challenges Details: (Attach the snapshot and briefly write the report for the same)

A screenshot of a web browser displaying a GitHub repository. The address bar shows the URL: github.com/alvas-education-foundation/Pramod_R/new/master/coding_solutions. The repository name is 'Pramod_R / coding_solutions / Anagram_8thJuly.java'. The code is written in Java and is displayed in a light-themed editor. The code defines a class 'Anagram' with a static method 'isAnagram' that takes two strings as input and returns a boolean. The method first checks if the lengths of the two strings are equal. If not, it returns false. If they are equal, it converts both strings to lowercase, removes spaces, and then sorts the characters of both strings. Finally, it checks if the sorted arrays are equal. If they are, it returns true; otherwise, it returns false. The 'main' method is also present, which calls 'isAnagram' with the strings 'alvasinsitute' and 'aalvsiittsue', and 'allergy' and 'allergic'.

The question we had received today was :

Write a java program to find whether the given strings are anagram.

Code: The above snapshot is the code which I have uploaded in my github repository.
